AIELP – AI EXECUTIVE LEADERSHIP PROGRAMME

200 MODEL QUESTIONS – STUDENT LEARNING & PRACTICE

Questions Without Options | Answer Key Included

Section A – Business & Management

1. The main purpose of a business is to:
2. A mission statement mainly explains:
3. A vision statement describes:
4. SWOT stands for:
5. Which is an internal SWOT factor?
6. Which is an external SWOT factor?
7. A KPI is used to:
8. Delegation means:
9. A stakeholder is:
10. A SMART objective should be:
11. Benchmarking means:
12. Organizational structure shows:
13. Productivity is generally:
14. A business process is:
15. Strategic management focuses mainly on:
16. A manager primarily coordinates:
17. Planning helps an organization by:
18. A policy is generally:
19. An objective is:
20. Performance management is mainly about:

Section B – Entrepreneurship & Business Models

21. An entrepreneur is someone who:
22. A startup is commonly designed to:
23. A value proposition explains:
24. A target market is:
25. Customer segmentation means:
26. A revenue model explains:
27. A subscription model usually involves:
28. A business model explains how a company:
29. An MVP is:
30. MVP testing helps a startup:
31. Market validation checks:

- 32. Bootstrapping means:
- 33. A pivot is:
- 34. Competitive advantage is:
- 35. Customer acquisition means:
- 36. Customer retention means:
- 37. A business risk is:
- 38. A business opportunity is:
- 39. A pitch is:
- 40. Why study competitors?

Section C – Marketing & Customer Thinking

- 41. Marketing is primarily about:
- 42. The traditional 4Ps are:
- 43. Which P covers distribution?
- 44. Brand positioning describes:
- 45. A buyer persona is:
- 46. A customer pain point is:
- 47. Customer journey means:
- 48. Market research is:
- 49. Primary research is:
- 50. Secondary research uses:
- 51. A call to action is:
- 52. Conversion rate measures:
- 53. Digital marketing uses:
- 54. Content marketing involves:
- 55. SEO stands for:
- 56. Customer feedback helps identify:
- 57. A/B testing means:
- 58. A marketing funnel shows:
- 59. Customer lifetime value estimates:
- 60. Data-driven marketing helps:

Section D – Finance & Business Numbers

- 61. Revenue is:
- 62. Profit is generally:
- 63. A fixed cost generally:
- 64. A variable cost generally:
- 65. Cash flow is:
- 66. A budget is:
- 67. ROI stands for:
- 68. ROI helps assess:
- 69. Break-even occurs when:
- 70. An asset is:
- 71. A liability is:
- 72. Working capital is:
- 73. Gross margin is based on:

- 74. Financial forecasting helps:
- 75. Cost control means:
- 76. An invoice is:
- 77. A purchase order is:
- 78. Financial discipline means:
- 79. Revenue and profit differ because:
- 80. A financial dashboard helps management:

Section E – AI & Technology Fundamentals

- 81. Artificial intelligence is technology that:
- 82. Machine learning enables systems to:
- 83. Generative AI can:
- 84. An AI model is:
- 85. Training data is used to:
- 86. A prompt is:
- 87. Prompt engineering means:
- 88. AI outputs should be verified because:
- 89. AI hallucination means:
- 90. Automation means:
- 91. An API is:
- 92. Cloud computing means:
- 93. Cybersecurity focuses on:
- 94. Phishing is:
- 95. Multi-factor authentication uses:
- 96. Data privacy concerns:
- 97. A database is:
- 98. Analytics means:
- 99. Predictive analytics uses data to:
- 100. Responsible AI emphasizes:

Section F – AI for Business & Management

- 101. AI can support managers by:
- 102. Before asking AI to solve a problem, a manager should:
- 103. A strong business prompt should include:
- 104. Human-in-the-loop means:
- 105. AI-assisted decision making means:
- 106. AI can support market research by:
- 107. AI can support HR by:
- 108. AI can support finance by:
- 109. AI can support marketing by:
- 110. AI can support operations by:
- 111. An AI use-case is:
- 112. A valuable AI use-case should have:
- 113. After AI gives a recommendation, the team should:
- 114. Data quality matters because:
- 115. AI governance provides:

- 116. AI adoption means:
- 117. AI adoption can fail because of:
- 118. Process redesign means:
- 119. The best AIELP view of AI is:
- 120. A good AI implementation should be:

Section G – Leadership, HR & Teamwork

- 121. Leadership is:
- 122. Emotional intelligence is:
- 123. Active listening means:
- 124. Teamwork means:
- 125. Delegation requires:
- 126. Coaching helps an employee:
- 127. Mentoring provides:
- 128. Employee engagement refers to:
- 129. Feedback is useful because it:
- 130. Constructive feedback should be:
- 131. Conflict management means:
- 132. A team goal is:
- 133. Psychological safety means:
- 134. Employee development means:
- 135. Training needs analysis identifies:
- 136. Succession planning prepares:
- 137. Performance appraisal is:
- 138. Competency means:
- 139. Role clarity helps:
- 140. Servant leadership emphasizes:

Section H – Problem Solving & Decision Making

- 141. A problem statement should:
- 142. Root cause analysis seeks:
- 143. The 5 Whys technique:
- 144. Brainstorming is used to:
- 145. Critical thinking involves:
- 146. A hypothesis is:
- 147. Evidence is:
- 148. A decision matrix helps:
- 149. Prioritization means:
- 150. The Pareto principle suggests:
- 151. Risk assessment involves:
- 152. Scenario planning explores:
- 153. A trade-off is:
- 154. Decision criteria are:
- 155. Bias can:
- 156. Stating assumptions allows them to be:
- 157. An experiment is:

- 158. Iteration means:
- 159. A decision tree shows:
- 160. The first step in a complex problem is usually:

Section I – Data, Analytics & Research

- 161. A research variable is:
- 162. Quantitative data is:
- 163. Qualitative data includes:
- 164. A sample is:
- 165. A research population is:
- 166. A survey is:
- 167. Correlation measures:
- 168. Causation means:
- 169. The mean is:
- 170. The median is:
- 171. The mode is:
- 172. A dashboard is:
- 173. Data visualization helps:
- 174. A trend is:
- 175. Data cleaning means:
- 176. A research question is:
- 177. Reliability refers to:
- 178. Validity refers to:
- 179. Managers use visualizations because they can:
- 180. If data contradict a preferred conclusion, an analyst should:

Section J – AIELP Practical Executive Thinking

- 181. The core purpose of AIELP is to develop:
- 182. The AIELP core formula is:
- 183. Why define a problem before using AI?
- 184. Sales fall 20%. First step:
- 185. Hundreds of complaints should first be:
- 186. Before launching a product, validate:
- 187. Many leads but few conversions suggests examining:
- 188. A surprising AI forecast should be:
- 189. Repeated missed deadlines require examination of:
- 190. Low software adoption suggests asking:
- 191. A customer says service is slow. Investigate:
- 192. High website traffic but low purchases suggests checking:
- 193. Three projects but limited resources requires:
- 194. Poor product reviews should lead to:
- 195. An unsupported AI statistic should be:
- 196. Reducing cost without hurting quality requires studying:
- 197. Two strategies are disputed. A good approach is to:
- 198. A founder asks what to do next. An executive should provide:
- 199. An important AIELP mindset is:

200. After implementing a solution, the team should:

ANSWER KEY – MODEL ANSWERS

1.	Create value for customers	2.	The organization's purpose
3.	A desired future state	4.	Strengths, Weaknesses, Opportunities, Threats
5.	Strength	6.	Opportunity
7.	Measure progress toward objectives	8.	Assigning responsibility and appropriate authority
9.	A person or group affected by or interested in an organization	10.	Specific and measurable
11.	Comparing performance with a reference standard	12.	Roles and reporting relationships
13.	Output relative to resources used	14.	A series of activities producing a defined result
15.	Long-term direction and objectives	16.	People and resources
17.	Providing direction and resource priorities	18.	A guiding organizational rule or principle
19.	A result an organization aims to achieve	20.	Managing, measuring and improving work performance
21.	Identifies opportunities and creates value through a venture	22.	Develop and test a scalable or repeatable business model
23.	Why a customer should choose the offering	24.	The customer group a business aims to serve
25.	Dividing customers into meaningful groups	26.	How a business earns income
27.	Recurring customer payments	28.	Creates, delivers and captures value
29.	A basic product version used to test assumptions	30.	Learn before making a large investment
31.	Whether a real market wants the solution	32.	Building a venture mainly with available resources and limited external funding
33.	A significant change in strategy based on learning	34.	A capability or position that helps a firm outperform alternatives

35.	Gaining new customers	36.	Keeping customers over time
37.	An uncertain event that could negatively affect objectives	38.	A situation that may create value or growth
39.	A concise presentation of a business idea	40.	To understand alternatives, gaps and positioning
41.	Creating, communicating and delivering customer value	42.	Product, Price, Place, Promotion
43.	Place	44.	How a brand is perceived relative to alternatives
45.	A research-based profile of a target customer type	46.	A problem or frustration experienced by the customer
47.	The stages a customer experiences with a brand	48.	Systematic collection and analysis of market information
49.	Information collected directly for the current research purpose	50.	Existing information collected by others
51.	A prompt asking the audience to take a specific action	52.	The percentage completing a desired action
53.	Digital channels and technologies	54.	Creating useful content to attract and engage audiences
55.	Search Engine Optimization	56.	Needs, problems and improvement opportunities
57.	Comparing two versions to see which performs better	58.	Stages from awareness toward conversion
59.	Value generated by a customer over the relationship	60.	Reduce guesswork and improve decisions
61.	Income generated from business activities	62.	Revenue minus relevant costs and expenses
63.	Does not change with short-term output volume	64.	Changes with activity or output
65.	Movement of cash into	66.	A planned estimate of

	and out of a business		income and expenditure
67.	Return on Investment	68.	Return relative to investment
69.	Total revenue equals total costs	70.	A resource controlled by a business with economic value
71.	An obligation or amount owed by a business	72.	Current assets minus current liabilities
73.	Revenue minus cost of goods sold	74.	Anticipate future financial needs and scenarios
75.	Managing spending efficiently	76.	A document requesting payment
77.	A formal request to a supplier for goods or services	78.	Following approved financial controls
79.	Profit considers relevant costs and expenses	80.	Monitor important financial indicators and trends
81.	Performs tasks involving aspects of human-like intelligence	82.	Learn patterns from data
83.	Generate new content such as text, images or code	84.	A computational system designed or trained for a task
85.	Help an AI model learn patterns	86.	An instruction or input given to an AI system
87.	Designing effective instructions for AI systems	88.	AI can produce inaccurate or incomplete information
89.	An unsupported or fabricated-looking AI output	90.	Using technology to perform tasks with less manual intervention
91.	A way for software systems to communicate	92.	Using computing resources delivered over a network
93.	Protecting systems, networks and data from digital threats	94.	A deceptive attempt to obtain sensitive information
95.	More than one factor to verify identity	96.	Proper handling and protection of personal or sensitive information
97.	An organized collection of information	98.	Examining data to gain insights

99.	Estimate likely future outcomes	100.	Accuracy, fairness, privacy, safety and accountability
101.	Analyzing information and supporting decisions	102.	Define the problem and desired outcome
103.	Context, task, data and desired output	104.	Humans review or participate in AI-supported decisions
105.	Using AI insights while humans retain responsibility	106.	Organizing information and identifying themes
107.	Assisting with job descriptions and learning plans	108.	Assisting with reporting and trend analysis
109.	Assisting with content, segmentation and campaign analysis	110.	Identifying patterns and improving workflows
111.	A specific task where AI may create useful value	112.	A clear problem and measurable benefit
113.	Validate evidence and feasibility	114.	Poor data can produce unreliable outputs
115.	Rules for responsible AI use	116.	Integrating AI into real work and decision processes
117.	Poor process fit, weak data or lack of skills	118.	Changing a workflow to improve outcomes
119.	AI supports human executive thinking	120.	Measured, reviewed and improved
121.	Guiding people toward shared goals	122.	Understanding and managing emotions
123.	Listening carefully and confirming understanding	124.	Coordinating efforts toward a common objective
125.	Clear responsibility, authority and expectations	126.	Improve capability through guidance and practice
127.	Longer-term guidance and support	128.	Commitment and involvement in work
129.	Shows strengths and improvement areas	130.	Specific and focused on behavior and improvement

131.	Addressing disagreements constructively	132.	A shared outcome
133.	People can speak up respectfully without fear of humiliation	134.	Improving skills, knowledge and capabilities
135.	Skill gaps relevant to work	136.	People and capabilities for future key roles
137.	A structured review of work and development	138.	Knowledge, skills and behaviors needed for effective performance
139.	Reduce confusion about responsibilities	140.	Supporting people and organizational growth
141.	Clearly describe the issue and desired outcome	142.	Underlying causes
143.	Repeatedly asks why to explore causes	144.	Generate ideas before evaluation
145.	Evaluating evidence and assumptions logically	146.	A testable proposed explanation
147.	Information supporting or challenging a claim	148.	Compare alternatives using criteria
149.	Ordering work by agreed importance or urgency	150.	A small number of causes may create a large share of effects
151.	Identifying and evaluating potential risks	152.	Plausible future situations and responses
153.	Giving up one benefit to gain another	154.	Standards used to compare alternatives
155.	Distort judgment or interpretation	156.	Tested and challenged
157.	A structured test designed to learn	158.	Repeating with learning from previous attempts
159.	Choices and possible outcomes	160.	Define and understand the problem
161.	A characteristic that can take different values	162.	Numerical data
163.	Opinions, experiences and themes	164.	A subset of a population
165.	The full group of interest	166.	A structured way to collect information from

			respondents
167.	Association between variables	168.	One factor contributes to producing an effect
169.	The arithmetic average	170.	The middle value when ordered
171.	The most frequent value	172.	A visual display of important metrics
173.	Communicate patterns and insights	174.	A general direction of change
175.	Handling inaccurate, inconsistent or incomplete data	176.	A clear question the study seeks to answer
177.	Consistency of a measurement	178.	Whether a measure captures what it should
179.	Make patterns and exceptions easier to see	180.	Investigate objectively
181.	Executive thinking using AI and business problem solving	182.	Vision → Problem → AI → Decision → Strategy → Execution → Review
183.	AI analysis depends on understanding the real problem	184.	Define the problem and collect evidence
185.	Classified by type, frequency and impact	186.	Customer need and willingness to use or pay
187.	The conversion journey and barriers	188.	Checked against data and assumptions
189.	Process, workload, dependencies, skills and accountability	190.	What barriers prevent effective use?
191.	Process steps and actual waiting-time data	192.	Conversion rate and journey barriers
193.	Prioritization using agreed criteria	194.	Analysis of recurring issues and prioritized improvements
195.	Verified before use	196.	Cost drivers, process waste and quality impact
197.	Compare them using agreed criteria and evidence	198.	An evidence-based recommendation with risks and expected outcomes

199.	Think deeply, use AI intelligently, validate and execute responsibly	200.	Measure results, learn and improve
------	--	------	------------------------------------

Learning Tip: Try answering each question independently before checking the model answer. Focus on understanding the business reasoning behind each answer.
